About Us

Devine Industrial Systems, Inc.

Since 2005, Devine Industrial Systems has given top priority to providing customers with the highest quality products and services. Our number one priority is to offer safe and superior quality products to our customers. We understand the sustainability of our business also depends on how we interact with our customers.

Devine Industrial Systems, Inc., located in Oklahoma City, Oklahoma, is a custom hydraulic system fabricator and machining company that specializes in building equipment and supplying customers with fabricated or machined parts. We have people with over 30 years experience in metal fabrication, machining, hydraulics, and electrical.

Devine Industrial Systems, Inc.

All things are not the same if your plan is to purchase a Custom Hydraulic Power Unit.

For years, the predominate manufacturing of these systems was done by Fluid Power Distributors, not true fabricators.

That's just one of the many differences our company is known for. For over 3 decades the people here have been doing things differently.

"The customer comes first" is our motto, not selling product lines.

Putting the customer first is easy if you pick only the finest combination of parts and apply knowledge from in the field, worldwide experience and customer input, and using old world craftsmanship.

Diesel Engine Power Units

Here at Devine Industrial System, we strive to put customer needs first.

We are not locked into any certain component brand. We use only the best component for the application.

Each power unit is custom engineered and built to your specification. We supply AutoCAD drawing with a bill of materials and schematics with each power unit so you can identify any issues after installation.

3D Modeling

Using 3D modeling software, you can reduce the potential errors that you may encounter before material is on the shop floor. This reduces unnecessary cost and time so the product can ship on time.

From the design process to the finished product. You can see what your getting.
